

Chili

Craig's Grande Jalapeno, Heirloom

A delicious, fat jalapeño that is perfect for making lots of salsa. Perfect for anyone who loves jalapeños. It has thick, flavorful, hot flesh. Developed at Redwood City Seeds. We love this one!

They have a moderate heat level, similar to standard jalapeños, with a Scoville range of about 5,000-8,000 units, making them perfect for those who enjoy a bit of heat.

- 70-75 days to maturity
- 8-12 hours of full sun
- Plant Spacing: 14-18"
- Ideal Temperature: 70-95 F

Chilis thrive in well-drained, fertile soils with a pH of 6.5. Abundant phosphorus and calcium is needed for the best results. Tender annual. Plant out after all danger of frost is past. Space chili plants 12-18" apart in rows 24-36" apart, or 2 rows mulching, 18" between plants. Water-in transplants well. Apply a liquid bloom and boost type fertilizer (phosphorus) at transplant time. Install collar (toilet paper tubes cut into 2-3 pieces work well) around seedling at time of transplant to prevent cutworm destruction. Install cage or stakes at time of transplant. Pick the first chilis promptly when they reach full size to encourage further fruit set.
